

Ref. 196

## Description

### EXTERNAL TRIM WIHTOUT CYLINDER

Latch when outside from either side, except when outside lever is made inoperative by thumb turn. Dead bolt operated by key outside or turn inside. Key outside operates both bolts.

Operating the inside lever retracts both bolts, and the outside remains locked. The latch bolt is deadlocked when the outside lever is made inoperative or when the dead bolt is projected.

When dead bolt is retracted, lever is unlocked by thumb turn.
